Moderator: Martin Schreiber, MD, FASC

How to Choose a Dialyzer – Andrew Davenport, MD | 10:00 am - 10:25 am

TO THE HOSPITAL AND BEYOND: A SPECIAL PROGRAM ON CHILD LIFE AND DIALYSIS:

Welcome – Amanda Porter, MS, CCLS and Robin Davis, CCLS

Program Description: Child Life Specialists (CLS) are members of the health care team who provide support for patients and their family members throughout their hospital journey. Their services and support vary depending on the needs of each individual patient and family that they encounter. CLS have special expertise to educate and work alongside the interdisciplinary team. Some of their activities include utilizing therapeutic play to allow the child to understand their time in the hospital system, preparing patients for what they are going to experience in the hospital to promote positive coping, assisting with pain management techniques and how to empower a patient to do difficult tasks in addition to supporting the family throughout this journey. All these interactions are guided by the CLS's knowledge of child development.

The goal of this special program is to provide a forum to share information of the roles of Child Life Specialists (CLS) in Nephrology with fellow Nephrology Practitioners and foster an exchange of ideas on how this group of professionals can best support and serve the unique patient population they care for. | 10:00 am - 10:15 am

KIDNEY HEALTH EVALUATION HEDIS MEASURE: IMPROVING CKD RECOGNITION IN PRIMARY CARE (12:30 PM – 2:00 PM)

Moderator: Laurie Hines, JD

Speakers: Kevin Schendel, MD, Elizabeth Montgomery, BS

Chronic Kidney Disease (CKD) is a public health issue. The majority of people at risk for CKD - 60% of patients with diabetes and 90% of patients with hypertension - do not receive recommended testing for CKD. Over 80% of the 37 million Americans with CKD remain undiagnosed in primary care, including almost 50% of people with advanced CKD. These breakdowns in testing and recognition prevent opportunities for early intervention and timely nephrology referral, which has been shown to improve downstream outcomes and reduced costs of care. In partnership with the National Committee on Quality Assurance, the National Kidney Foundation (NKF) has developed the Kidney Health Evaluation for Patient with Diabetes HEDIS measure. The goal of this measure is to improve CKD testing among people with diabetes. This session discusses the current state of CKD testing and the implications of the Kidney Health Evaluation measure for improving CKD care in primary care. This session will also provide a primary care clinician's perspective on the implementation of a community-based CKD program and the impact of measures designed to improve CKD testing. The session will conclude with a roundtable discussion of implementation strategies for the Kidney Health Evaluation HEDIS measure. | 12:30 pm - 2:00 pm
